

The project is one of the country's first large-scale hydrogen production demonstration projects based on renewable energy and one of the region's first wind-solar energy hydrogen ...

A gigantic 2-gigawatt agrivoltaic project in China will generate clean power while restoring vegetation in a desert.

Fully powered by green electricity from directly coupled wind and solar energy, the plant efficiently integrates wind, solar and storage with hydrogen-ammonia production to optimize costs and...

Expanding the use of green hydrogen, ammonia and ethanol will be crucial for China to achieve deep cuts in carbon emissions while ensuring domestic energy security, as the future growth ...

When China decided to cover large expanses of the Talatan desert in Qinghai province with solar panels, the goal was clear: generate clean energy to power cities and reduce their carbon ...

With solar farms in the desert and wind farms in the mountains, Gulang County, once a sand-ravaged area, has capitalized on its rich sunlight and wind resources and reaped both ...

In recent years, Balinzuo Banner has deeply integrated carbon trading into its overall development, leveraging the forestry and grassland industries as a core link. This has achieved a ...

In 2006, he received two of these panels through a government project promoting solar power among locals. Since then, the panels have become part of his essential gear, accompanying his tent and ...

This series of measures aims to systematically enhance the new energy access capability in the eastern region of Mongolia, enabling more clean energy to be smoothly integrated into the ...
