Why do cellular base stations have backup batteries?

[...]Cellular base stations (BSs) are equipped with backup batteries to obtain the uninterruptible power supply (UPS) and maintain the power supply reliability. While maintaining the reliability, the backup batteries of 5G BSs have some spare capacity over time due to the traffic-sensitive characteristic of 5G BS electricity load.

What is a base station?

Base stations are the core of mobile communication, and with the rise of 5G, thermal and energy challenges are increasing. This article explains the definition, structure, types, and principles of base stations, while highlighting the critical role of thermal interface materials in base station heat management for reliable and efficient networks.

What are the components of a 5 G base station?

Firstly, in terms of energy equipment, the electrical component characteristics of the 5G base station's constituent units are modeled, including air conditioning loads, power supply systems, and energy storage systems.
