

The United Kingdom's New Energy Battery Testing System market is experiencing a strategic phase of growth driven by the accelerating adoption of electric vehicles (EVs), renewable ...

Work at the new battery testing facility will focus on the adoption of next-generation batteries such as solid-state, sodium-ion, and Lithium iron Manganese Phosphate (LFMP), as these ...

We want to build a new standard for the UK's battery technology landscape, and this new facility is part of a long-term, multi-million-pound investment strategy over the next five years to ...

Our dedicated battery test center in the UK has 1.5 MW installed power and boasts a wide range of specialist facilities for battery testing and type approval, including a safe battery storage facility.

Focus on next-generation batteries such as solid-state, sodium-ion, and LFMP. 3,000ft² lab designed to provide critical data and insights for battery performance, reducing development ...

AIS offers a complete battery testing service from its remote, UK based facility, Europe's largest battery testing and material development centre.

Please contact us to discuss your requirements for electrochemical tests, measurements or models.

Batteries and products containing batteries sold in the UK are ...

Batteries and products containing batteries sold in the UK are subject to various safety standards, substance restrictions, labelling, documentation, and testing requirements. Ensuring ...

We enable our customers to better understand the performance, safety, and longevity of their battery systems with our rigorous testing capabilities. With our consultancy services, customers can obtain a ...

With ISO/IEC 17025 laboratory accreditation, lithium battery expertise and over 30 years' experience of the requirements and test methods of vehicle manufacturers, we can meet all your battery testing ...
