

Is Brazil a success story in the fuel energy transition?

In 2021, Brazil accounted for about 27% of all global biofuel production. Thus, while much of the world is still moving towards the diffusion of biofuels, Brazil is well ahead on this path. Therefore, the country is an international success story in the fuel energy transition. The diffusion of solar energy in Brazil is recent.

How does Brazil manage the energy transition?

While renewable sources supply the national demand, a large part of the new pre-salt resources is exported abroad. In this sense, Brazil manages to reconcile the energy transition process, through the diffusion of renewables, with the increase in oil production.

Why is PLANTE important for Brazil's energy transition?

1. Ensure that PLANTE serves as a coherent, overarching plan for the national energy transition that achieves a sustainable and balanced economic and social transformation for Brazil. Brazil has made commendable progress in advancing the energy transition in line with its very ambitious climate change targets.

What is Brazil's energy plan?

It outlines a year forecast and planning framework for the ten- development of Brazil's energy sector, covering supply, demand, infrastructure and policies. The P DE is based on the most important dimensions associated with energy planning: economic, strategic, social and environmental.
