

Can Mexico's energy storage field use batteries

Mexico's new regulation mandating battery systems for solar and wind projects positions it as a model for energy storage integration in Latin America, according to a new report.

According to Jorge Islas, Deputy Minister of Energy Planning and Transition, all new intermittent renewable energy plants will require 30% of their capacity in batteries, with the batteries capable of storing at least ...

Mexico's new 30% battery storage mandate is set to transform the renewable energy sector. Learn how this policy impacts grid stability, private investment, and the future of energy storage solutions.

This reflects a significant commitment to strengthening Mexico's energy infrastructure, aimed at improving the stability and efficiency of the national electricity system, where battery storage technology will ...

Declining lithium-ion battery costs and advancements in battery chemistry are making large-scale energy storage projects more viable in Mexico's utility and non-utility sectors.

According to Mexico's Deputy Minister of Energy Planning and Transition, all new intermittent renewable energy plants will be required to include batteries equivalent to 30% of installed capacity, with at ...

Renewable energy developers in Mexico will need to provide battery storage equivalent to 30% of a plant's capacity, senior energy ministry official Jorge Islas said.

According to the regulations promulgated in March 2025, all new solar and wind power projects must be equipped with battery systems equivalent to 30% of their installed capacity, with a minimum ...

Future wind and solar energy projects in Mexico will be required to colocate battery energy storage systems equivalent to 30% of their capacity, a senior government official told the Senate on Tuesday.
