The CERTS Microgrid Concept represents an innovative approach to controlling the electrical operation of the energy sources and loads within a microgrid while minimizing the need for communication ...

The CERTS Microgrid concept seeks to provide microgrid functionality without extensive (i.e., expensive) custom engineering. In addition, the design of the CERTS Microgrid also provides high ...

This standard focuses on ensuring that interconnected generators will shut down automatically if problems arise on the grid. By contrast, the CERTS MicroGrid would be designed to seamlessly ...

CERTS Microgrid concept captures the emerging potential of distributed generation using a system approach. CERTS views generation and associated loads as a subsystem or a "microgrid". The ...

The CERTS Microgrid Project has been sponsored by both the U.S. Department of Energy (DOE) and the California Energy Commission (CEC).
