

Energy-starved countries on the continent have reluctantly turned to coal and gas for decades. Cheap Chinese solar panels are now finally changing the calculus.

African nations imported a record 1.57 gigawatts (GW) of solar panels from China in a single month--the strongest signal yet that the continent is embracing the sun as its most abundant resource. ...

China's solar exports to Africa are surging. Over the course of the past year, Chinese companies shipped out solar equipment to a vast range of countries on the continent, according to an...

Africa is emerging as the world's fastest-growing solar market, with China playing a critical role in the process, according to a new report by the African Solar Industry Association, or AFSIA.

African nations are ordering more solar panels from China, with imports of the clean-energy technology surging 60% in the 12 months through June, according to climate think tank Ember.

Solar power is widely recognized as an excellent solution for Africa. Sunlight is abundant, economies crave reliable power sources, and the technology is becoming massively cheap.

Africa's solar imports from China hit 15 GW in 2025, up 60%. Record growth signals a clean energy boom, but capacity still lags global pace.

There has been a major pick-up in solar panel imports into Africa over the last 12 months - a shift that is likely to impact almost every country on the continent. This report presents Ember's analysis of ...

In Sub-Saharan Africa, these inexpensive off-grid solar (OGS) home systems sold by Chinese private companies are bringing economic and social benefits to households that are eons away from getting ...

Africa's solar imports soared 60% to 15 GW in 2025, fueled by China, reshaping power and cutting diesel reliance.
