

China's cumulative power-sector energy storage capacity reached 213.3 GW by the end of 2025, up 54% year on year, according to data from the China Energy Storage Alliance (CNESA)...

Energy After the mandate: China's energy storage sector one year on With clean energy projects no longer needing to be bundled with energy storage, companies are finding new ...

The competitive landscape within China's photovoltaic energy storage integrated system market is characterized by a mix of established multinational corporations, domestic industry leaders, ...

As China accelerates the deployment of renewable energy, the stability of the power system faces persistent operational constraints. Energy storage, serving as a pivotal enabling ...

China's energy storage industry has experienced explosive growth in recent years, driven by rapid advancements in technology and increased demand, solidifying its position as a leader in ...

In 2023, Chinese investment into battery capacity increased by nearly 30%, shifting from EVs to energy storage systems (ESS). What's more, China's planned energy storage capacity for ...

It provides quarterly in-depth analysis of market dynamics in China, Japan, Korea, Southeast Asia, America and other key regions around the world, covering core dimensions such as policy guidance, ...

By the end of 2023, China had completed and put into operation a cumulative installed capacity of new type energy storage projects reaching 31.4GW / 66.9GWh, with an average storage duration of 2.1 ...

In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. 2023 was a breakthrough year for industrial and ...

As China accelerates the shift toward renewable energy and builds a new type of power system, energy storage has become indispensable.
