

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

This year, the milestone was achieved in June. That pace cements solar as the fastest-growing source of new electricity generation worldwide.

Solar additions have remained low after hitting a record 93 gigawatts in May when developers rushed to install panels ahead of policy changes. Meanwhile, solar cell output reversed a ...

In April 2025, China installed more solar electricity in a single month than Australia has ever done. Australia leads the world in solar energy, so this is not about the country lagging behind.

While the impact on the installation rush for utility-scale PV is expected to be lower, this year is still on track to set a new record, with 167 GW of new utility projects expected.

In remote areas like Muli County, Liangshan Yi Autonomous Prefecture, the company introduced a self-developed integrated solar-storage-cooling system using liquid temperature ...

China's solar power capacity has surpassed 1 TW, marking a historic milestone as the country accelerates its energy transition. Around 92 GW of new PV systems were installed in China in...

Under the agreement, the 2 companies aim to advance the "multi-tower single turbine" demonstration project. This project will serve as a benchmark integrated solar-storage and grid ...

China's solar panel installations surged in the first half of the year as developers sought to complete projects before the new policy, which removed a guaranteed rate of return, took...

China's approach to renewable energy buildout combines large-scale investment, technological innovation and market reform. China is installing more renewables than any other ...
