

# Current status of solar power generation and energy storage

Is solar photovoltaic the new cornerstone of the global power sector?

In the past three months, the International Energy Agency, the International Renewable Energy Agency, and BloombergNEF published preliminary data for the power sector in 2024. These data hammer the same powerful message: solar photovoltaic (PV) has become the new cornerstone of the global power sector.

How many GW of solar generating capacity will come online in 2026?

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity compared with the end of 2025. Much of the utility-scale solar generation capacity additions will come online in Texas.

What is the growth rate of solar energy generation in 2024?

In this context, electricity generation from solar PV grew by a record 475 TWh (30%), the largest increase of all electricity generating technologies by far (Chart 1). In 2024, the growth in electricity generation from solar PV alone surpassed that of all other renewable energy (RE) technologies combined.

Does solar power generation have a high-penetration scenario?

The present review provides an overview of the present status of solar power generation and a high-penetration scenario for the future growth of solar energy. However, the study ends up with a future recommendation for developing better penetration in PV technology and generation.

The present review provides an overview of the present status of solar power generation and a high-penetration scenario for the future growth of solar energy. However, the study ends up ...

The world is facing a climate crisis, with emissions from burning fossil fuels for electricity and heat generation the main contributor. We must transition to clean energy solutions that ...

Much of the utility-scale solar generation capacity additions will come online in Texas. We expect that solar electricity generation supplied to the grid managed by the Electric Reliability Council ...

Global energy storage capacity outlook 2024, by country or state Leading countries or states ranked by energy storage capacity target worldwide in 2024 (in gigawatts)

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and ...

It examines the current state of solar power and related academic solar energy research in different countries, aiming to provide valuable guidance for researchers, designers, and policymakers ...

Global Energy Perspective 2025 Geopolitical uncertainty, shifting policies, and increasing demand for power are reshaping the energy landscape. This year's report presents our updated view on what's ...

# Current status of solar power generation and energy storage

Abstract and Figures A worldwide evaluation of the present status of renewable-energy generation, with a focus on photo-voltaic (PV) solar energy for the production of electricity.

In the past three months, the International Energy Agency, the International Renewable Energy Agency, and BloombergNEF published preliminary data for the power sector in 2024. These ...

Abstract and Figures A worldwide evaluation of the present status of renewable-energy generation, with a focus on photo-voltaic (PV) solar energy ...

Solar photovoltaic (PV) and wind have constituted the majority of new global power capacity for several years according to the United Nations 2025 Energy Transition Report. "Despite ...
