

The seminar will bring together researchers, doctoral students, and industry experts from Estonia, Finland, and Latvia to discuss the latest developments in energy efficiency, smart electrification, and ...

Although microgrids and nanogrids are not new concepts, events in recent years, such as the systematic destruction of energy infrastructure in Ukraine and extreme fluctuations in energy ...

We invite researchers from Academia and Industry to discuss technical challenges, exchange novel ideas, explore enabling technologies, and present R&D results related to power electronic systems, ...

The Ministry of Climate and other government bodies oversee the implementation of 71 measures, supporting island communities in adopting smart grids, microgrids, and district heating ...

Grid-tied and islanded operation of the fully installed, high-penetration system at Miramar was demonstrated in December 2015 and again in June 2016. As a result, the project team received the ...

**ABSTRACT** The concept of microgrids (MGs) as compact power systems, incorporating distributed energy resources, generating units, storage systems, and loads, is widely acknowledged ...

The Microgrid industry in Estonia is influenced by several key considerations that potential stakeholders should be aware of. First, Estonia's regulatory framework encourages innovation in renewable ...

The microgrid control system market in Estonia is growing as the country invests in decentralized energy solutions. Microgrid control systems are crucial in managing the operation of microgrids, ensuring ...

Estonia has also one of the few Smart Grids in the world, integrating hardware and software to produce real-time and predictive data on nationwide electricity patterns. Generators and distributors are ...

By developing and validating key power electronics for future-proof DC microgrids in residential buildings, the research group of Vinnikov is spearheading innovation in this field.
