

As part of the European Green Deal, Croatia aims to achieve a 42.5% share of renewables in gross final energy consumption by 2030. To reach this ambitious goal, the country ...

Croatia increased all the most important targets in its updated National Energy and Climate Plan for 2021-2030. The share of renewable energy sources in energy consumption grew ...

Renewables are an increasingly important source of energy as countries seek to reduce their CO2 emissions and dependence on imported fossil fuels. Renewables are mainly used to generate ...

Renewables are making only modest gains in Croatia. Progress is visible in the power sector, but the share of clean energy in transport continues to decline. Renewable energy's share in ...

Croatia offers many opportunities for developments in the renewable energy sector, particularly solar energy. The country has one of the highest insulations in the EU, between 2000 and 2700 hours of ...

Croatia has significant potential for the use of renewable energy sources, including solar energy, wind energy, hydro energy, and geothermal power. 30 percent of energy currently consumed ...

Croatia's revised 2030 National Energy and Climate Plan aims to reach a 42.5 percent share of renewable energy by 2030 and a 62 percent drop in emissions within the European Emissions ...

Croatia possesses significant renewable energy potential, primarily due to its abundant resources in hydropower, wind, geothermal, and solar energy. Despite limited domestic reserves of fossil fuels, ...

By the end of 2024, Croatia had reached 3.8 GW of installed renewable energy capacity, with solar energy doubling its figures in one year. By 2025, photovoltaic power is expected to exceed ...

Croatia has great renewable energy potential, particularly when it comes to wind power. The integrated national energy and climate plan for Croatia has new national targets, with the share ...
