

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity ...

European Commission published the Battery Booster Strategy as part of the European Automotive Action Plan. The strategy includes a Battery Booster Facility to support battery manufacturing in the ...

Batteries Europe, launched in 2019, is the technology and innovation platform of the European Battery Alliance, run jointly by the Commission and stakeholders in the battery industry.

LONDON, Feb 6 (Reuters) - Europe's battery storage capacity is expected to grow around five-fold by 2030, bringing with it increasing returns for energy majors, project developers and...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

Though the battery energy storage revolution continued to unfold across Europe in 2024, setting yet another annual installation record, we also witnessed a substantial slowdown in market ...

Over the past few years, Europe has shifted from deploying energy storage systems to optimizing and standardizing them. As grid-scale and C&I projects mature, buyer expectations ...

Explore 2025 BESS projects across Europe, from Germany's Na-ion advancements to France and Spain's renewable energy storage initiatives.

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent ...
