How to connect a battery in series?

Connecting batteries in series means to connect the positive terminal of the first battery to the negative terminal of the second battery and so on down the string. The interconnecting cables must have equal lengths and resistance to equalize of the load.

How do you connect a lead-acid battery?

Ensure equal cable length from each post to each battery. Connect halfway. Ensure all cables have the same thickness. Connect diagonally. Note that while connecting the battery this way is simple and effective, it is not perfect. There may still be slight differences in the individual battery currents. 3.4. What happens if you connect a battery in a series?

Connecting batteries in series increases the voltage of a battery pack, but the AH rating (also known as Amp Hours) remains the same. To connect batteries in a series, a jumper wire connects a battery's negative terminal to another battery's positive terminal.

How do I increase the capacity of a lead-acid battery?
