What happens to my meter after installing solar panels?

After I install panels, what happens to my meter? When your solar PV system is installed you may need to have a new meter installed. If you have a traditional accumulation meter (with a spinning disk) this will need to be replaced with an interval meter or smart meter.

Do I need a solar meter?

The short answer is: it depends on what type of meter you already have, and how your local utility manages solar energy. Let's break it down. When you install a solar PV system, your panels generate electricity from sunlight. That energy powers your home first. Any surplus can then be sent back to the grid and that's where your meter comes in.

How does a solar energy meter work?

In that case, when your solar system produces more electricity than your home appliances use, it exports it to the grid and the new smart energy meter reverses it and can be seen reversing it as well, which is why the power company will force you to replace your old energy meter when installing a solar photo-voltaic system.
