

Propose the development of hydrogen storage infrastructure in salt caverns offshore Dublin as a Project of Common/Mutual Interest under the Trans-European Network for Energy (TEN-E).

As part of the Horizon 2020 Spine project, Energy Reform carried out an in depth analysis of the role for hydrogen based technologies and long term energy storage in the Irish energy system.

The SH2AMROCK Project brings together public and private collaborators to deploy green hydrogen as part of the EU Horizon program for research and innovation. From digital twins to startup hubs, ...

The Strategy sets out the strategic vision on the role that hydrogen will play in Ireland's energy system.

Ireland takes a leap towards clean energy with its largest battery storage facility. Explore the benefits of this 150 MWh project.

This paper examines the opportunities and challenges associated with the development of a hydrogen economy to support decarbonisation in Ireland (in line with the RePowerEU communication, action ...

Chemical Reactions: Underground storage of hydrogen entails a risk of (a) hydrogen loss by bacterial conversion to methane (CH₄) and hydrogen sulphide (H₂S), and (b) gas-water-mineral interactions ...

We currently have more than 300MWs of battery storage capacity in operation in Ireland, making it one of the largest battery portfolios in Europe. We plan to develop a pipeline of large scale battery ...

To achieve both decarbonisation goals and energy security for Ireland, substantial amounts of hydrogen will be needed for flexible electricity generation, high-grade industrial heat and ...

This paper investigates the potential role hydrogen can play in Ireland's energy transition, proposing hydrogen as an energy vector and storage medium that may help the country achieve its ...
