

The BESS market in India is on the cusp of unprecedented growth, driven by the country's ambitious renewable energy goals and the critical need for grid stabilisation.

Three initiatives, regulations or policies related to decentralised energy storage have been updated or introduced by the relevant agencies at the national or state level.

New Delhi: India's energy storage sector is set to grow by over 12 times to 60 GW by FY32, driven by a massive increase in variable renewable energy (VRE) and the need to maintain ...

Standalone Energy Storage Systems (ESS) are rapidly emerging as a key market, with 6.1 gigawatts of tenders issued in the first quarter of 2025 alone, accounting for 64% of the total utility-scale energy ...

This case study is part of BCSE's Granary of Solutions to deliver emissions reductions, increase resilience, and meet energy transition goals worldwide.

Energy Storage Systems (ESS) can be used for storing available energy from Renewable Energy and further can be used during peak hours of the day.

This surge in energy storage could prove pivotal for both meeting increased future demand and decarbonization goals as India integrates more renewable power and strengthens grid stability.

Developed a detailed Energy Storage Roadmap for India for deployment of different ESS technologies with timelines under various scenarios of VRE and EV penetrations

In this context, the dramatic decline in energy storage costs--marked by a nearly 90% reduction in global storage prices over the last decade and recent energy storage auctions in India reflecting a ...

The report, Strategic Pathways for Energy Storage in India Through 2032, tackles these questions. With its sharp analysis and data-driven approach, it maps out practical, affordable ways to roll out storage, ...
