

# Investment in solar power generation pays off in 3 years

How long does it take to pay off solar?

For the average solar shopper, that translates to around \$57,000 in savings over 25 years. Your payback period depends on your electricity costs, system size, and how you pay for solar. Some shoppers break even in five years. Others take closer to 15.

How do solar energy costs affect your return on investment?

Specific energy costs in your area also directly impact your return on investment (ROI) from your solar power system. The higher your monthly electric bill, the more quickly you tend to recoup your investment because it shortens your payback period.

Do solar panels have a payback period?

Several factors will influence the ROI of your solar panels. This payback period is not guaranteed. To figure out payback period without the solar panel cost calculator, we first calculate the true cost of installing solar after incentives have been claimed.

How much money can you earn from solar energy?

In some states, you can earn money from solar renewable energy certificates (SRECs) or net metering credits. If you're earning \$513 annually from SRECs, your total annual benefit jumps to \$2,613. Eliminated electricity costs (\$2,100) + annual incentives (\$513) = annual savings (\$2,613). Do the math
