

What percentage of European electricity comes from solar energy?

In 2024, 47.5% of the electricity consumed in the EU came from renewables and 23.4% of renewable electricity came from solar energy (Eurostat, January 2026). June 2025 was the first month in history where solar energy was the main source of electricity generated in the EU at 22%. Source: SolarPower Europe

Is solar power the EU's leading source of electricity?

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals that solar accounted for 22.1% of the EU's electricity mix, surpassing nuclear and leaving fossil fuels far behind.

What is the largest source of electricity in the EU?

Solar became the EU's largest source of electricity for the first time in June 2025. National records for solar and wind rolled in across EU countries in May and June, pushing coal to an all-time low. In June 2025, solar was the largest source of EU electricity for the first time, with multiple countries producing record amounts of solar power.

Why is European Solar so popular?

Europe's solar success is fueled in part by strong public support for renewable energy, with nearly 90% of Europeans backing EU efforts to expand it, according to the European Commission. Rooftop solar, lower energy bills and greater independence from fossil fuel markets have resonated especially with younger, climate-conscious consumers.

Solar energy technologies convert sunlight into energy, either as electricity (photovoltaics and concentrated solar power) or in the form of solar heat. Solar is the fastest growing energy source in ...

In June 2025, solar was the largest source of EU electricity for the first time, with multiple countries producing record amounts of solar power. Wind power in the EU started the summer ...

Discover which European countries offer the best solar incentives. Compare subsidies, ROI, permitting ease, and forecasts through 2025.

The European solar market slows to 65.5 GW of new installations in 2024, marking just a 4% growth compared to 2023. Explore the challenges and future outlook for solar energy in Europe ...

In Q2 2025, renewables powered 54% of EU electricity, with solar leading the mix and topping all sources in June for the first time.

BERLIN -- Solar has become the EU's main source of electricity, marking a historic turning point in Europe's energy mix as solar power surpasses nuclear and wind, accelerates ...

To achieve EU solar goals, policymakers must redefine energy security around renewable electrification,

adopt a comprehensive energy system flexibility strategy, implement ...

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, ...

In a historic milestone for clean energy, solar power became the leading source of electricity in the EU for the first time in June 2025. New data from energy think tank Ember reveals ...

The first half of 2025 will go down in Europe's energy history: for the first time ever, solar became the leading source of electricity, covering 22.1 % of the EU's power mix and generating 45 ...
