

A record-breaking 20-megawatt (MW) offshore wind turbine has been connected to China's grid in the Fujian Province.

In fact, it was an airborne wind turbine completing its maiden in-flight grid-connected power generation test. The airborne wind energy system comprises an airship platform and wind ...

In this work, we reviewed power quality issues in grid-connected distributed renewable energy generation systems. Power fluctuation and harmonic distortions emerge as the most critical ...

There are plans to increase the wind-diesel hybrids systems in off grid areas from the current 0.55MW to 10 MW by 2018. The Government is currently in the process of introducing the ...

To comply with grid code regulations, wind turbine generators must remain connected and actively contribute to system stability during grid faults. One of the critical grid code requirements is the fault ...

The reduction also takes place in the non-linear load from 29.29% to 27.88%. The TCSC system reduced the voltage dip from 30% to 0%. For future work, a controller could be designed ...

The paper discusses the wind turbine and wind power plant control strategies, and new control approaches, such as grid-forming control, are presented in detail.

The importance of renewable energy sources has increased rapidly in recent years. Among these renewable energy sources, wind energy comes to leading due to its

By combining the adaptability of fuzzy logic with the optimization systems of PSO and GA, our approach maximizes energy yield, ensures grid stability, and enhances overall system ...

Depending on the operator's requirements, different configurations of medium-voltage GIS allow the individual wind turbines to be safely connected to the wind farm's own power grid.
