

Other tools simulate entire buildings, including energy gains/losses through the building envelope, energy gains from internal loads, and energy used by the HVAC systems to maintain user-prescribed ...

With climate change concerns and rising energy costs, designing and maintaining sustainable MEP systems can help reduce energy ...

Discover the essential mechanical systems that provide thermal comfort, manage waste, and ensure the safety of modern buildings.

© 2025 National Institute of Building Sciences. All rights reserved. NIBS uses cookies to improve your user experience, visitor analysis, ensure the site is reliable/secure, and support our mission. Click ...

This UFC is issued to provide guidance for designing and installing facility-scale renewable energy systems. The criteria contained herein are intended to ensure durable, efficient, and reliable ...

In residential buildings, energy systems focus on reducing energy consumption through efficient HVAC systems, high-performance windows, and insulation. ...

From advanced HVAC systems and building automation to renewable energy integration and high-performance building envelopes, these technologies are transforming how buildings are ...

Smart mechanical systems encompass a wide range of technologies and components that work together to optimize building performance, energy ...

UFCs incorporate building codes, DoD requirements, and applicable statutory provisions. UFC content that is fully unified and applicable across all DoD Components have no alphabetical suffix in the title.

The design of piping systems for heating and cooling of buildings has evolved into five or six major systems, a few minor and little-used systems, and combinations of the various systems depending ...

Design high performance and sustainable buildings with efficient mechanical, electrical, plumbing (MEP) and fire protection systems coordinated into the overall design.

Almost all historic buildings were ventilated naturally, although many of these have been compromised by the addition of partition walls and mechanical systems.

All facility-related control systems (including systems separate from a utility monitoring and control system)

must be planned, designed, acquired, executed, and maintained in accordance with UFC 4 ...

The components of a daylighting system are designed to bring natural light into a building in such a way that electric lights can be dimmed or turned off for a portion of the day, while preventing occupant ...

Explore cutting-edge mechanical engineering solutions revolutionizing HVAC systems in modern buildings with energy-efficient designs and smart technologies.

The chapter provides a comprehensive summary on the energy systems used in buildings, with emphasis on green buildings. Advanced and up-to-date design concepts in the area of renewable ...
