

Distributed GridMaster system software runs on multiple Intelligent Power Controllers (IPCs) located throughout the microgrid, all connected with encrypted communication, to quickly make decisions ...

A microgrid control system (MCS) is the central intelligence layer that manages the complex operations of a localized power grid. This system integrates diverse power sources, such as solar arrays, wind ...

NLR develops and evaluates microgrid controls at multiple time scales. Our researchers evaluate in-house-developed controls and partner-developed microgrid components using software ...

Turnkey microgrid control solutions include electrical system protection, cybersecurity, real-time controls, integration with existing infrastructure, and more.

A microgrid control system is defined as an integral component of a microgrid that utilizes a communication system to manage and monitor its operation, ensuring safe, secure, reliable, ...

Building a sustainable energy future together Microgrid is a localized, decentralized energy system that can operate independently or in conjunction with the main utility grid.

A microgrid control system, also known as a microgrid automation system, is a comprehensive solution for managing distributed energy resources (DERs), load centers, and grid connectivity to ensure ...

This review focuses on existing control methods, particularly those addressing frequency and voltage stability, energy management, threat mitigation and explores a spectrum of engineering ...

Learn about ETAP Microgrid, an integrated solution used to efficiently evaluate and optimize microgrid systems. The solution enables simulation and hardware-in-the-loop testing for microgrid systems ...

NLR collaborated with Caterpillar to test a prototype utility-scale energy storage inverter and microgrid controller. Microgrid operation was validated in a power hardware-in-the-loop ...
