

The objective for each student team was to design a microgrid for the student's school using renewable energy sources under cost, schedule, performance, and risk constraints.

First Student and Con Edison are building a solar- and battery-equipped electric bus-charging microgrid in Brooklyn, complete with solar-panel-topped EV school buses.

Lake Oswego School District builds nation's first microgrid-designed school, combining solar, battery, and diesel power to create a resilient facility that operates on and off the grid.

School transportation firm First Student is working with New York utility Con Edison on developing a solar microgrid to support fleet electrification for buses in Brooklyn.

Con Edison and First Student are constructing a microgrid in Brooklyn to manage the charging requirements of electric school buses.

This advanced energy system allows microgrids to supply energy on demand, achieving the lowest energy prices from locally produced energy. Incorporating various energy sources ...

This training program will provide an in-depth overview of microgrid applications, technologies, and configuration, as well as examples and virtual tours of operational microgrids, and detailed ...

The demonstration project in Brooklyn comes as school bus electrification gains momentum nationwide. First Student has approximately 2,000 electric school buses under contract in school districts across ...

With the installation of a microgrid, including solar panels, EV chargers, and battery storage, the farm is beginning its transition off the utility grid and toward 100% carbon-free electricity ...

This microgrid is for education and for demonstrating technologies. It shows, in action with real hardware, how utility-scale solar plus storage can be used as the centerpiece of a microgrid and ...
