

High and further increasing volatility of power prices due to the expansion of renewables on the one hand and significantly decreasing prices for battery cells in recent years on the other hand ...

As the share of renewable energy in the power grid continues to grow, so does the need for efficient electricity storage. In 2024, battery storage systems in Germany grew by approximately ...

More than 2.2 million energy storage systems have now been installed in Germany, with around 526,000 new systems added in 2025 - around one quarter of the total fleet.

RWE signs MoUs to explore LNG supply and invest in battery storage in Germany, enhancing energy security and supporting renewable energy integration.

Germany's energy transition has reached a decisive moment. With more than 90 GW of installed renewable capacity already feeding into the grid -- and coal phase-out timelines ...

Energy storage has become a strategic pillar for Germany. In 2024, nearly 600,000 new stationary battery storage systems were installed in the country, according to data from the German ...

A successful energy transition will require a variety of storage systems to absorb electricity during peak times and release it when needed -- for example in the evening and at night.

Major investments in the expansion of Germany's electricity and pipeline networks are planned as part of the integration of renewable energy and the ongoing consolidation of Europe's energy markets.

Germany's grid-scale battery buildout hit a record year in 2025, with installed capacity now standing at 2.4 GW. But BESS additions come in slower than pipeline projections assumed, as grid connections ...

Across three days, the Summit brought together developers, investors, utilities, TSOs, OEMs and service providers to explore the commercial, regulatory and operational realities of energy storage in ...
