

Extendable, roof-mounted solar system installed on Nissan Sakura Kei EV. System harnesses sunlight to add up to 3,000 km<sup>1</sup> of driving range annually. Project seeks to reduce ...

In a bold move toward self-sustaining electric mobility, Nissan has unveiled a prototype of the "Ao-Solar Extender", an innovative onboard solar power generation system installed on its best ...

Check out this nifty EV power solution. Nissan is showing off a prototype electric vehicle equipped with an onboard solar power generation system at the Japan Mobility Show (nee Tokyo...

A breakthrough from Nissan could signal a shift in how renewable energy powers transportation, bringing solar-generated electricity directly to electric vehicles without the ...

Nissan installed the extendable, roof-mounted solar system, "AO-Solar Extender," on a Sakura prototype, which it plans to showcase at the Japan Mobility Show later this month.

Nissan unveils its solar-powered car with panels generating energy for up to 3,000 km per year, marking a new step in sustainable mobility.

Nissan selected the Sakura, Japan's top-selling EV, as the platform for this solar integration technology. According to Nissan's development team, the system could generate ...

Developed in-house, the solar panel system is designed to reduce reliance on the grid and enhance the convenience of EV ownership by simplifying charging. The team developing the ...

Nissan's Ao-Solar Extender represents a promising step toward environmentally conscious transportation. By supplying solar-generated electricity directly to a popular kei EV, Nissan aims to ...

The Ao-Solar Extender aims to generate sufficient electricity to cover 3,000 kilometers of driving per year. According to the market analysis of Nissan Sakura users' driving data, most users are short ...
