

While not as dominant as hydroelectric storage, battery energy storage systems (BESS) are gaining traction in Norway for shorter-term storage and grid services.

A special feature of the Norwegian hydropower system is its high storage capacity. Norway has half of Europe's reservoir storage capacity, and more than 75 % of Norwegian production ...

Norsk Hydro has approved the construction of the Illvatn pumped-storage project in Luster, western Norway, the company's largest hydropower development in more than 20 years, ...

Norsk Hydro, a Norwegian aluminum and renewable energy company, is planning a 84 GWh pumped storage project in Luster Municipality, Norway. The Illvatn project, with an estimated price tag of ...

Norway's hydropower pumped storage capacities, amounting to 83 TWh, are increasingly being leveraged to regulate renewable energy surpluses in Europe and stabilize electricity prices.

Norway has announced a major expansion of its Northern Lights carbon capture and storage project, increasing its capacity to 5 million tons of CO₂ per year.

The expansion in Phase 2 will increase the transport and storage capacity from 1.5 million to at least 5 million tonnes of CO₂ per year. The project includes expanding the onshore terminal at ...

Northern Lights is the world's first merchant CO₂ transportation and storage project. The first phase of the project has a storage capacity of 1.5 Mt CO₂/year, which has been fully booked by ...

Finland, Norway and Sweden have a substantial energy storage capacity of approximately 125 TWh, thanks to their large hydro reservoirs. To put the Nordic hydro storages into perspective, the energy ...

Operations are expected to begin this summer, including the first shipment of CO₂ from Heidelberg Materials' cement factory in Brevik, Norway, to a reservoir 2,600 meters below the ...
