

Driven by its determination to lead by example and become a reference in climate neutrality, Porto committed to accelerate carbon neutrality by 2030, reducing its greenhouse gas (GHG) emissions by ...

Porto Climate Pact (2022) Mitigating these emissions is urgently needed to avoid unpredictable consequences on the natural, economic, and social systems. The European Union has been leading ...

We face a global challenge that demands disruptive and visionary, transformative and ambitious actions, that drastically decrease GHG emissions, ensuring the path towards carbon neutrality in societies.

The Porto Climate Pact laid the foundation for a citizen-driven climate mission. It isn't a dry political document but a call to action, inviting all residents, businesses, and community groups to ...

The city has achieved a 43% reduction in emissions in 2020 compared to 2004 levels and has a target of reducing emissions by 85% until 2030. The remaining 15% will be offset.

These enhancements reduce traffic congestion and help cut down on greenhouse gas emissions. Alongside public transit improvements, the city promotes cycling and walking by investing ...

You can explore its green spaces, use its public transport, and support local businesses that prioritize environmental responsibility. By doing so, you become a part of Porto's journey towards carbon ...

Porto realised that combining reduction and adaptation would equal the success needed to lead us to a zero emissions balance. Reducing and adapting is the new paradigm, but there is still ...

With funds allocated to the tune of 2.2 billion euros, this project aims to accelerate the city's path to carbon neutrality by 2030, reflecting a commitment to environmental sustainability.

By cutting emissions and sequestering the residual carbon, the city strives for carbon neutrality. The Municipality of Porto has consistently worked towards decarbonizing the city, though its direct ...
