

How can I tell whether the tree trimming around my lines is for the transmission or distribution system? The power lines near my house don't seem to be anywhere near the trees, so ...

The efforts made to protect our local power grid seem more than warranted, but the protocol to do so appears shortsighted.

It is a matter of public safety and the reliability of the power grid. California regulations require utilities to trim trees or vegetation so they don't grow into or fall into high-voltage power lines, which could not ...

The blackout that disrupted electric service to the entire northeastern United States in August 2003 was caused by tree limbs coming in contact with transmission lines in Ohio thereby causing major power ...

We apologize that while the tree's appearance may be compromised, the procedure promotes proper wound closure and is only conducted to preserve public safety and prevent power outages.

Trees and power lines don't mix, but with the right approach, they can coexist safely. Santee Cooper performs tree trimming to preserve public safety and the reliability of the electric grid.

We regularly undertake a cycle of inspection and survey of our overhead power lines and we carry out our tree cutting programme over several years so as to constantly maintain and guard against trees ...

Trees and other plants benefit our electric system, from providing shade that helps reduce energy usage to forming natural barriers for security purposes. Yet, vegetation presents some of the ...

Proper maintenance of trees and plant material growing around overhead powerlines is essential to avoid potential electrical hazards and power interruptions. Trees near power lines need ...

Vegetation-related impacts to the power system are the most common cause of power outages in the U.S., accounting for more than twenty percent of incidents [1,2].
