

# Proportion of base stations of telecommunication operators

How many 5G base stations are there in China?

At the end of 2023, operators had installed 3.4 million 5G base stations, accounting for more than 30% of China's total mobile base stations.<sup>1</sup> Data from the Chinese telecoms regulator also shows that more than 80% of administrative villages have 5G connectivity.<sup>2</sup> Innovative solutions may be needed to extend 5G coverage to hard-to-reach areas.

How many 5G base stations will China deploy in 2023?

An MIIT minister said that China's operators will deploy 600k 5G base stations in 2023, taking total to 2.9m. Astonishing scale of investment and execution in #China for #5G, creating a pervasive connectivity fabric that is driving massive digital transformation. 1.4 million base stations for 5G alone!!!

How does a base station affect a 5G network?

The architecture and shape of the base station directly affect how the 5G network is deployed. In the technical standards, the frequency band of 5G is much higher than that of 2G, 3G and 4G networks. At this stage, 5G networks mainly work in the 3000-5000MHz band. The higher the frequency, the greater t

Can a base station serve a radio?

Again, most of the sites have distributed RAN (D-RAN) so there may be one or more base stations (baseband unit or BBU) and each base station can serve one or more radios. See links at the bottom for tutorials on these topics.

To meet the increasing demand for these capabilities, telecom operators invest heavily in deploying 5G base stations, the backbone of 5G networks, facilitating faster data transmission over wider areas.

More than 718,000 5G base stations have been put into operation, including more than 330,000 5G base stations jointly built and shared by China Telecom and China Unicom. The number of cellular ...

The figure accounted for 52.4 percent of the total mobile subscribers in China's three major telecommunication enterprises and China Broadnet, which stood at nearly 1.78 billion by the ...

For example, the collaboration between telecom operators and city planners has led to the installation of base stations on existing structures, minimizing the need for new land acquisitions and reducing ...

The three major operators have also expressed their intention to increase the construction of 5G base stations. It shows that the country is determined to promote 5G construction.

As there are many sites hosting infrastructure from multiple operators, the number of logical sites are more than the number of physical sites. Again, most of the sites have distributed ...

At the end of 2023, operators had installed 3.4 million 5G base stations, accounting for more than 30% of

# Proportion of base stations of telecommunication operators

China's total mobile base stations.<sup>1</sup> Data from the Chinese telecoms regulator also ...

The total length of the national optical fiber cable network reached 74.99 million km, while the number of data center racks provided by the three major telecom operators reached 938,000. ...

5G Base Station Market Analysis by Mordor Intelligence The 5G Base Station Market was valued at USD 37.44 billion in 2025 and estimated to grow from USD 47.87 billion in 2026 to reach ...

Telecom operators are the primary end-users of base stations, as they are responsible for providing mobile communication services to consumers. The ongoing deployment of 5G networks and the ...
