This drawing shows a roof assembly with exterior rigid foam, which has been enough to discourage solar installers from attaching panels. Illustration courtesy Kaster.

This test records the time required to shear a defined area of tape from a test panel at a constant load under a number of variable conditions, including sample size; substrate material; load; heat and ...

New solar panels often arrive with protective film--but should it stay on? This comprehensive guide explains the crucial difference between factory shipping films (which must be ...

Ventilation of some type, that allows for good airflow under the panels is a good idea, but I recommend that you not place insulation under the panels. Keep them as cool as possible.

Unlike traditional methods that involve drilling holes and potentially causing damage to the roof, Solar Stack utilizes a spray polyurethane foam adhesive to securely bond the mounts to the roof surface.
