

Solar hit 10.7% of US power in April, a new record, as wind + solar beat coal and nuclear, and renewables came within 2% of natural gas.

Solar electrical generation set new records in July and the first seven months of 2025: EIA's latest monthly "Electric Power Monthly" report (with data through July 31, 2025), once again ...

The United States installed a record-breaking 50 gigawatts (GW) of new solar capacity in 2024, the largest single year of new capacity added to the grid by any energy technology in over two ...

The US is experiencing its most transformative year for electricity generation in over 20 years, driven by a surge in solar energy and backed by large-scale battery storage.

According to the Energy Information Administration (EIA), the U.S. added 31 gigawatts (GW) of solar generation capacity in 2024 alone, raising the total to 121.2 GW. An additional 3 GW ...

Discover how last year set new records in solar power generation, marking a significant milestone in renewable energy advancements.

The U.S. generated a record 756,621 gigawatt-hours (GWh) of electricity from solar and wind in 2024 -- enough to power the equivalent of more than 70 million average American homes.

The US added a record 49GW of new solar capacity in 2024, as renewable power contributed to more than 1,000TWh of the country's total electricity generation for the first time in a ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

Solar generation has doubled over the last three years to reach over 2000 TWh. Solar was the largest source of new electricity generation globally for the third year in a row (+474 TWh) and ...
