

The EU Emissions Trading System (ETS) puts a price on carbon and lowers the cap on emissions from certain economic sectors every year. It has successfully brought down emissions from power ...

Two of the scenarios, that is, the BAU and the LCSc for Cyprus fail to restrain carbon emissions below the targets mandated by the EU. Assessing the remaining scenarios, the CCSc yields a decrease in ...

The 27 countries in the European Union, including Cyprus, have signed with the European Green Deal and aim to reach net zero emissions by 2050 by reforming almost every industry and economic sector.

Cyprus's 2023 per capita emissions were 24.1 % lower than in 2005. They amounted to 10.4 tonnes of CO₂ equivalent (tCO₂e), 3.2 tCO₂e above the EU average. The country also reduced the carbon ...

Cyprus has set ambitious climate targets, but achieving these will be challenging, even with full implementation of current plans. Carbon taxation is a crucial tool for Cyprus to meet its ...

Explore carbon removal policy in Cyprus. Track strategies, funding, and how CDR is emerging in national climate policy frameworks.

Despite its small carbon footprint, Cyprus is committed to contributing to global emissions reduction, President of the Republic, Nikos Christodoulides, said in his intervention at the 2024 ...

According to the latter, the Republic of Cyprus must contribute to achieving the EU-wide target of reduction of greenhouse gas emissions by 55% in 2030 compared to 1990 ("Fit-for-55" policy ...

Energy is responsible for the majority of climate change-causing greenhouse gas emissions, mostly from the burning of fossil fuels. Despite efforts to reduce these emissions, the trajectory of CO₂ emissions ...

For the transition of Cyprus to a climate-neutral economy in the mid-21st century, the following must be achieved: Almost complete decoupling from fossil fuels in all energy end-uses ...
