

Saga EPDM rubber profiles offer excellent thermal resistance and electric insulation for solar installations. Saga D shaped rubber seals are manufactured from high quality EPDM with prime ...

In order to improve a solar module's degree of efficiency, a transparent liquid silicone can be used to encapsulate the solar cells. This is particularly important for tailored solar panels that cannot be ...

Roof-Solar EPDM is a photovoltaic mounting system used for installing solar panels on flat roofs. It is used on buildings with rubber membrane roofs.

Our mats are UV- and weather-resistant, making them perfect for outdoor solar installations. They won't crack in freezing temperatures or under heavy sun exposure and provide ...

Our state-of-the-art, super-wide calenders ensure that our silicone membranes are free of seam marks, delivering a clean and efficient lamination process for solar PV panels.

Crafted from high-performance rubber materials--including EPDM, silicone, and TPV--these pads are engineered to withstand harsh outdoor conditions, from extreme temperatures to UV radiation, ...

A rubber solar panel is a flexible, durable photovoltaic solution designed for versatile energy generation in diverse environments. These panels integrate solar cells with a rubberized backing or ...

Elasto Proxy can supply solar panel manufacturers with all of these rubber products. We're also ready to support companies that make solar canopy, solar carport, and solar awning ...

Engineered elastomer parts that protect and seal photovoltaic assemblies from weather, vibration, and long-term UV exposure for maximum power output.
