

What is a solar photovoltaic (PV) panel?

A solar photovoltaic (PV) panel is a device that can convert solar energy directly to electricity. However, thermal energy accumulating in PV panels inevitably results in the increase of its temperature, leading to the decrease of PV's efficiency, which is already low. Combining PV panel with the hot side of TEG could enhance the PV's power output.

How does a photovoltaic solar panel work?

To explain the photovoltaic solar panel in simple terms, the photons from the sunlight knock electrons into a higher state of energy, creating direct current (DC) electricity. Groups of PV cells are electrically configured into modules and arrays, which can be used to charge batteries, operate motors, and to power any number of electrical loads.
