

In February 2025, China shelved a requirement that new domestic wind and solar projects be bundled with energy storage. The change meant that China's storage providers could no longer ...

China's solar and onshore wind capacity reaches new heights, while offshore wind shows promise China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the ...

Since introduced in 2022, policy mandates requiring solar and wind energy projects to include energy storage systems have been crucial in the acceleration of storage deployment in China.

Shanxi Province, Gansu Province, and Qinghai Province have abundant wind and solar power resources. To mitigate the volatility and instability of new energy power generation such as wind and ...

Industrial energy storage systems, offering benefits such as enhanced power reliability, are crucial for bridging self-developed solar power facilities with the public grid, and require effective ...

The world's first intelligent grid-forming photovoltaic and energy storage power station, tailored for ultra-high altitudes, low-temperatures and weak-grid scenarios, has been connected to ...

Carbon Brief explores how China has been driving the energy storage sector forwards and how it fits into the nation's wider energy transition.

The power station is located in Wanning City, Hainan Province, China, and is supplied by Trinasolar. The project adopts Trinasolar's Vertex N 700W series modules, with an average annual power ...

While energy storage in China has surged ahead in the past few years, the significant new renewable energy capacity expected to come online across the country in the next three years will ...

The most notable finding: by the end of 2024, China had reached 73.76 GW / 168 GWh in cumulative new energy storage capacity--an increase of more than 130% year-on-year. This figure ...
