

Solar underground garbage collection and storage box

Discover solar powered compacting bins by TomRobots that reduce waste overflow, lower collection needs, and support cleaner outdoor spaces.

CleanCUBE, the solar-powered trash compactor bin. Holds up to eight times more waste than traditional bins and sends real-time data to a cloud platform.

Solar-powered smart garbage bins are transforming urban and rural waste management by combining renewable energy with intelligent technology. These bins use solar panels to power compaction ...

CleanCUBE is a solar-powered trash compactor which can hold up to 5 times more waste compared to non-compacting bins, reducing collection frequency by up to 80%.

This project builds an automated trash collector for polluted waterways. It captures floating waste, reduces manual labor, and uses a mobile app for real-time waste monitoring, offering a sustainable ...

The BigBelly Solar Intelligent Waste & Recycling Collection System has been designed to harness the power of information technology and renewable energy to solve an expensive and messy problem: ...

H&G design and manufacture customized solutions for waste and recyclable material compaction, as well as underground waste collection systems.

The Bigbelly Solar Compactor is the HC5 model and is the original smart bin that started the smart bin sector. It is the only smart, solar-powered waste compactor that works in any location, thanks to it's ...

Our equipment is able to collect different types of street containers, whether on the ground or underground. This technology has a low environmental impact and is completely automatic.

An autonomous container system with a hydraulic lift allows municipalities to set up underground waste storage facilities without having to connect to the mains or other communications.
