

Swiss power grid builds liquid flow energy storage power station

The world's largest battery storage facility is to be built in a new technology center in Laufenburg (TZL) in the Swiss canton of Aargau - directly on the German border.

Switzerland is taking a bold step toward grid stability by constructing a liquid flow energy storage power station. This project addresses two critical challenges: storing excess renewable energy and ...

Located at the grid interconnection point on the borders of Germany, France and Switzerland, the battery will help stabilise electricity flows across national borders. It will be able to ...

Flexbase Group has begun construction on what could become one of Europe's largest flow battery storage installations, breaking ground on an 800 MW/1.6 GWh redox flow system in ...

Swiss company Flexbase is planning to build a 500MW/1.2GWh flow battery on the Swiss-German border. It is claiming it will be the biggest flow battery in the world. The company is ...

The foundation of the project lies in redox flow batteries, which use liquid electrolytes (usually based on vanadium or bromine) containing up to 75% water to store energy.

The transformative project repurposes the former Swissgrid facility and will house the world's largest and most advanced redox flow battery storage system, forming the core of a ...
