

The harm of installing photovoltaic panels to human body

Are solar panels harmful to human health?

Infrared radiation creates heat. But UV radiation can harm the skin and eyes. Researchers are investigating EMFs for their possible effects on human health. These include electromagnetic hypersensitivity, even though they are typically weak near solar panels. We scrutinize the health implications of solar panel materials.

Do solar panels emit harmful electromagnetic fields?

One of the most common concerns is the potential for solar panels to emit harmful electromagnetic fields (EMFs) or radiation. Since solar systems generate electricity from the sunlight, panels and their associated equipment, such as inverters and wiring, produce EMFs.

Are solar panels toxic?

Although some solar panels contain metals considered toxic in large quantities, it is very rare for humans to become exposed to these elements at any point in the equipment life cycle. In the best interest of our customers and the planet, PPM does not install solar panels manufactured with toxic materials.

Do solar panels cause cancer?

No. In a world where just about everything seems to cause cancer, solar energy adopters can rest assured that their rooftop panels will not create or add any unnecessary harm. For decades, studies have been performed to conclude that there are no associations between solar energy and cancer.
