

What happens if a solar panel is broken?

Common causes of solar panel damage are falling objects, thermal stress, and micro-cracks and scratches. A broken solar panel may continue to work, albeit at a reduced efficiency. Broken solar panels pose a serious fire and safety risk and must be removed and replaced. Some companies can fix broken solar panels, but this is costly.

Can a solar panel have a crack?

Even a panel with several cracks can still operate without any loss of efficiency. However, just because it still works, it doesn't mean you can leave it be. While it may generate power for you, it can also pose a serious safety risk. The key problem is that cracks on a solar panel will begin to let in water.

Can a broken solar panel be replaced?

The general rule of thumb is that broken or scratched glass can be replaced if it hasn't caused any further damage to the solar panel. Any damage to the inner components requires the solar panel to be replaced. Can I Fix Solar Panel Parts Myself?

Will a broken solar panel affect my energy bill?

Sometimes, broken solar panels might still work; however, they won't work as effectively, causing your energy bills to increase. A few small cracks or micro scratches shouldn't hinder your solar panel's overall performance, and you shouldn't notice the system output decrease immediately.
