

This project is a demonstration by the Tokyo metropolitan government that aims to realize the world's most advanced energy generation and transmission from the Tokyo Bay area. ...

Businesses will continue to develop products and services that take full advantage of the benefits of solar power generation. Houses equipped with solar power generation equipment will ...

In Japan, we are steadily approaching the establishment of a society where photovoltaic power generation is introduced on a mass scale, but various issues have emerged in order to realize ...

TOYO is one of the most experienced contractors for "mega solar power plant construction project" in Japan and accumulated track record reached to more than 700MW.

We will contribute with engineering, procurement, construction, and operation of solar power generation projects overseas and aim to build a high-quality supply chain with low cost.

A new project in Chiyoda Ward aims to decarbonize by generating solar power on its many buildings, turning walls and windows into efficient energy sources.

This goal reflects Japan's acknowledgement of its significant solar energy potential, which is enough to produce four times the country's current energy needs through PV system projects, ...

Japan is a leader in solar PV innovation and is now looking to grow its industry further amid US-China tensions and a shift to renewables. The country has been investing in floating solar ...

To this end, the University of Tokyo has been commissioned by the New Energy and Industrial Technology Development Organization (NEDO) to research and develop innovative solar ...

Its 7th Strategic Energy Plan, released in February 2025, projects solar to rise from its current 10% share of electricity generation to between 23% and 29% by 2040, more than any other ...
