

Microgrids can now be used in remote areas with limited or no energy access. Various organisations, including municipal governments, airports, military bases, nature preserves, and vertical farms, can ...

The good news is that the cost of installation is likely to decrease in the near future, and AceOn is working on technology (specifically, battery energy storage solutions), which will accelerate the ...

Eclipse Power Optimise works with you to design, build, and operate a private network or a microgrid. (We'll advise you on which route is right for you.) The result: a rapid reduction in the time it takes to ...

Microgrid is a scalable energy power solution built with sustainability in mind. Using a combination of Solar Power Frames, a Battery Energy Store, or a Solar Energy Store, Microgrid can power enough ...

We specialise in the design and supply of solar photovoltaic and wind power systems (typically less than 1kW) for &quot;off grid&quot; locations. We specialise in the supply of micro generation systems to agricultural ...

From car parks to rooftops, microgrid developments transform your assets into energy generators to help meet your low cost energy needs.

By harnessing both solar and wind energy, the Microgrid provides reliable, renewable power to meet the farm's energy needs, while the battery ensures a steady supply during periods of low generation.

We provide pre-configured, plug-and-go units to supply power 24/7 in remote locations, 365 days a year. Our roots lie in the design of small wind turbines, precision engineered and manufactured in the UK ...

We are experts in designing and optimising off-grid systems, incorporating solar PV, battery storage, and in most cases, a back-up generator.

Discover how microgrids are reshaping the UK's energy. We install solar, battery, and EV solutions that power communities sustainably.
