The following conclusions can be summarized: Photovoltaic power generation systems in buildings were introduced.

Can solar wall mounts be used to power grid based systems?

Investigations into solar wall mounts are necessary and continue to help demystify the generation, distribution and usage of the abundant and renewable energy from the sun. The resultant power from wall mounted photovoltaics could be made available to grid based systems from consumer terminals in an integrated and optimized scheme.

Can a wall-mounted photovoltaic system harness solar power efficiently?

This study outlined a design and mounting implementation for layout of wall-mounted photovoltaics products to efficiently harness solar power. The resulting prototype system was used to power a medium-scale homestead consuming less than five thousands watts of energy in a daily rhythm of solar presence.

Can wall mount photovoltaics improve power efficiency?

An 80% power efficiency have been achieved on normal sunny days by wall mounts only when compared with 100% efficiency of rooftops mounted photovoltaics used for control experiment. This has been possible by leveraging on enhanced power attaining equipment such as monocrystalline panels and MPPT charge converters.
