

# What flowers and plants can be grown under photovoltaic panels

By growing these crops--including flowers--under solar panels, farmers and landowners can optimize land use, support biodiversity, and generate renewable energy simultaneously.

**Specialty Crops:** Specialty crops, such as herbs and medicinal plants, can be grown in shaded areas beneath solar panels. These crops typically require less sunlight than traditional crops ...

Agrivoltaics, the practice of combining solar energy production with agriculture, offers a dual opportunity to generate renewable energy and grow crops on the same land. However, ...

When selecting crops that are uniquely suited to be grown in agrivoltaic settings, consider the guidance provided above. Ask questions related to the features of the solar panel design, ...

The success of crops grown under solar panels depends on thoughtful system design, appropriate crop selection, and adaptive management practices. As with any agricultural innovation, ...

Orchards under solar produce bountiful and healthier fruit. Japan has around 2,000 agrivoltaics farms growing over 120 crops, including most vegetables. Soft fruits benefit highly from ...

Vertically-vining or "indeterminate" growth forms that make maximum use of the space under solar panels by being trellised or "stiffer" scandent plants that lean upon a trellis (such as ...

Our guide, "What Can You Grow with Agrivoltaics? A Guide to Crops for Dual-Use Farming," explores how combining agriculture and solar energy maximizes land use, boosts crop ...

Not all crops perform equally; some plants thrive unequally under these conditions, while others may not perform as well. Below are some recommended crop families for agrivoltaic projects.

The reality is that crops can be grown underneath and in proximity to solar panels. Examples of these crops are listed below. Note that this is not an exhaustive list. Oats, potatoes, ...
