

In 1839, Alexandre Edmond Becquerel discovered the photovoltaic effect, a pivotal moment that laid the foundation for modern solar energy. This effect refers to the generation of an electric current when ...

Long before the first Earth Day was celebrated on April 22, 1970, generating awareness about the environment and support for environmental protection, scientists were making the first discoveries...

Gerald Pearson at Bell Labs in 1954 is credited to some as the real inventor of solar panels. In many people's eyes, this is the moment that PV technology was truly born. It was the first time that solar ...

In 1973, Elliot Berman founded Solar Power Corporation, a subsidiary of Exxon, and made huge strides in the cost of solar cell production. After 1973, oil companies used the extra profits to advance solar ...

The birth of photovoltaics, the development of the first solar cells, ...

The development of solar cell technology, or photovoltaic (PV) technology, began during the Industrial Revolution when French physicist Alexandre Edmond Becquerel first demonstrated the photovoltaic effect, or the ...

Where did solar energy come from? The story of solar energy begins with our ancestors. The early uses of solar energy were primarily passive, relying on the sun's heat for warmth and drying. Ancient civilizations had a ...

In 1883, New York inventor Charles Fritts created the first practical working solar cell by coating selenium wafers with an extremely thin layer of gold--a device that could generate consistent electricity from ...

When were solar panels invented? The development of solar panel technology was an iterative one that took a number of contributions from various scientists. Naturally, there is some debate about when ...

When were solar panels invented? The development of solar ...

The birth of photovoltaics, the development of the first solar cells, the use of solar energy in space technology, and the solar revolution following the energy crisis of the 1970s - each of these milestones ...

Solar technology isn't new. Its history spans from the 7th Century B.C. to today. We started out concentrating the sun's heat with glass and mirrors to light fires. Today, we have everything from solar-powered buildings to ...
