

Thinking of replacing your roof but already have solar panels installed? You're not alone. Many homeowners are surprised to learn that solar panels often outlive their roofs.

Many people believe solar panels stop working after 20 years, but that's untrue. These super-durable energy savers keep producing electricity decades after installation.

Yes, solar panels are still worth it for the vast majority of U.S. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. The primary financial driver is the cost ...

When you install solar panels and a new roof simultaneously, it's unlikely you'll need to re-roof during your system's lifetime. Solar panels are more durable than most roofing materials and can ...

The best time to install solar panels is during roof replacement or when your roof has at least 10-15 years of life left. This ensures long-term savings and fewer future issues.

Is it worth replacing your rooftop solar energy system? Learn why in the vast majority of cases, it's more beneficial for homeowners to keep their existing rooftop solar energy systems for as ...

How Long Will a Solar Panel Roof Last Compared with Your Current Roof? The first decision matches timelines. A solar panel roof commonly produces for about 25 to 30 years with a ...

Discover the best order for roof replacement and solar installation. Learn how timing impacts costs and efficiency for your home.

Make your roofing company aware that you will be installing solar panels and ask them if they will come back after they are installed to ensure the panels have not damaged the roof. The direction and pitch ...

Solar panels and roof shingles have similar life spans, so it makes sense to install roof-mounted solar panels soon after you get a new roof. If you put new solar panels on an older...
