

The way we generate power has changed dramatically over the centuries, evolving from basic manual labor and burning wood to advanced technologies harnessing the wind, sun, and atom.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according...

These charts show how renewables such as solar and wind will replace fossil fuels in power generation and which regions are leading the way in decarbonization.

Solar and wind power, among other renewable sources, are leading the charge toward a more sustainable future, but beyond these well-known technologies, there are new frontiers emerging in the quest ...

The findings suggest it is possible for the world to wean off polluting sources of power -- even as demand for electricity skyrockets -- with continued investment in renewables including solar, wind, hydropower, ...

Lazard has sought to address those concerns by adding a new calculation to its report that accounts for the cost of providing backup power to wind, solar and short duration storage batteries.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest-growing source of ...

Wind energy generation This interactive chart shows the amount of energy generated from wind each year. This includes both onshore and offshore wind farms. Wind generation at scale - compared to ...

Wind and solar are growing faster than any other sources of electricity in history, according to new analysis from thinktank Ember. It says they are now growing fast enough to exceed rising demand, ...

Globally, wind-and-solar now accounts for over 15% of electricity consumption, highlighting the growing reliance on low-carbon technology. Particularly in the US, there are pioneering states where this transition is even ...

Wind and solar are growing faster than any other sources of electricity in history, according to new analysis from thinktank Ember. It says ...
