

Wind power surpasses solar power in electricity generation

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

For the first time ever, renewables generated more power than coal as solar and wind outpaced global demand growth in early 2025.

Electricity demand is growing around the world but the growth in solar and wind was so strong it met 100% of the extra electricity demand, even helping drive a slight decline in coal and...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

For the first time on record, renewable energy sources like wind and solar produced more electricity than coal in the first half of 2025, marking a major milestone in the global transition...

Worldwide solar and wind power generation has outpaced electricity demand this year, according to a new analysis. Plus, for the first time on record, renewable energies combined ...

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. The combined output from global wind and solar power has, for the first ...

Wind power surpasses solar power in electricity generation
