

Xiaomi has filed a new patent for a multi-layered electrode design in a solid-state battery. That's a fancy way of saying they've found a new method for building a battery that can move energy ...

Xiaomi is developing solid-state batteries for its electric cars that enable a range of over 1,200 km according to Chinese testing standards and a fast-charging capability of 800 km in 10 minutes.

Xiaomi has disclosed a new patent marking its entry into solid-state battery development. The patent describes a layered electrode structure that improves ionic conductivity and energy ...

It has reportedly patented the technology it plans to use in a future solid-state battery. Solid-state batteries are considered the holy grail for EVs, but challenges persist in scaling...

Under our Xiaomi Labs environment, the solid-state battery has demonstrated a 20%+ improvement in performance compared to regular batteries at -20°C, providing reliable operation in ...

Chinese tech giant Xiaomi has filed a groundbreaking patent for solid-state battery technology, marking a potential leap forward in EV innovation.

Chinese electronics company Xiaomi has revealed a new patent that outlines a solid-state battery design, marking its formal entry into the development of next-generation battery ...

In a groundbreaking move that could redefine the electric vehicle industry, Chinese tech giant Xiaomi has filed a patent for a revolutionary solid-state battery featuring a layered electrode ...

This week, Xiaomi filed a patent for a next-generation solid-state battery that could dramatically boost range and charging speed. According to reports, the battery design may deliver ...

It adapts to current Li-ion lines and targets 1,200 km range. Xiaomi has filed a patent for a high-density electrode structure, marking its formal entry into solid-state battery development.
